

RS digital tachograph software DigiTac is used by thousands of satisfied truck operators throughout the whole of Europe.

What can DigiTac do for you?

RS DigiTac is a piece of digital tachograph software especially designed for you to store, visualize and print digital driver and vehicle data. The functions can be operated very easy and efficient while being assured that all legal requirements are met.

What makes our software standout among alternatives on the market?

RoadSoft has a user orientated focus what you immediately notice when you first start using our software. Truck operators and truck drivers are experts in the transportation area, they are no computer experts. Therefore we don't expect you to be! RS DigiTac is created to enable you to operate the software simple and fast. The video demonstrations and the manual that can be viewed on our website, support this.

DigiTac Design

Years back when the digital tachograph was first introduced we looked for existing products in the market. The available solutions were not designed from the users point of view. We decided to design something different, something better. RS DigiTac was carefully developed by listening to the preferences of its daily users and is not based only on technical requirements. This led to a user-friendly interface, which makes the wide variety of functionalities more easy to operate.

Value for Money

Once you have bought our software, there will be no ongoing costs associated. There will be free updates made available to you on the RS website. Of course the software will be accompanied by an easy to install guide. However, our friendly staff will be happy to support you if required.

RS DigiTac

Your User Friendly Digital Tachograph Software

Features

- Importing any type and number of files
- Exporting data in various popular and useful formats
